

Cell-cycle-depleted gene removal (C2_3_CC_DEPLETION_SUMMARY.tsv): C4_UP: 45/2491 genes (1.81%), remaining coverage 89.9% (Couturier); C4_DOWN: 141/2698 genes (5.23%), remaining coverage 88.3% (Couturier); C5_UP: 20/806 genes (2.48%), remaining coverage 91.6% (Couturier); C5_DOWN: 66/1065 genes (6.2%), remaining coverage 86.5% (Couturier); C5_STABLE_UP: 16/680 genes (2.35%), remaining coverage 92.9% (Couturier); C5_STABLE_DOWN: 62/912 genes (6.8%), remaining coverage 86.9% (Couturier)

Grade-B components are reported as sensitivity-dependent only: under CCDEP the ER-UPR MES component does not survive in Discovery; autophagy/lysosome is not significant in the bulk TCGA MES contrast ($P = 0.334$). No grade upgrade is made.
