

Layer B CNV-inferred pool: 7 patients, 262 cells (infernvcnpv). Pre-specified per-state gate: ≥ 3 cells and ≥ 2 patients. Recorded coverage (cells/patients): MES 11/3, AC 4/2, OPC 0/0, NPC 0/0, Cycling 12/3. The frozen decision table (C2_LAYERB_STATE_TESTS.tsv) records the per-patient state test as not applicable; that rationale matches OPC/NPC (0 cells), and Layer B state-level inference is reported as NOT TESTABLE, with no Layer B result claimed anywhere in the manuscript or figures.
